AWS and SAP: How can we help?

Here are just some of the options available to you...

Initial SAP and AWS meeting.

An SAP specialist from AWS will assess your current business priorities and assist you to understand potential options involving SAP and/or AWS.

AWS executive briefing.

A personalized combination of multiple 30 minute sessions focused on what is important to you and your executive colleagues. For example: Innovating with AWS in your Industry, SAP and AWS, Data and Analytics, AWS culture.

SAP on AWS business case.

Understanding the financial implications of migrating your existing SAP application landscape to AWS with a focus on: AWS architecture, migration costs and operating costs. This process will include a comparison to your current SAP infrastructure costs.

Modern data architecture workshop.

A workshop to explore the methods and benefits of combining SAP and non-SAP data in a cloud native data lake.

SAP migration discovery. Rapid assessment of your current SAP landscape to define the proposed target platform in AWS with high level migration considerations.

SAP availability advisor.

An in depth look at failure scenarios and fault tolerances and how this ties back to the architecture of your SAP environment on AWS.

SAP on AWS proof of concept.

A mini project to prove the technical performance of your current SAP application, and data, on AWS.

SAP well architected review.

Focusing specifically on your existing SAP on AWS environment this workshop is a guided conversation to run through the AWS Well Architected Framework.

SAP and AWS newsletter, ANZ.

Stay updated via these periodic summaries of: customer stories, thought leadership, upcoming events, AWS tech updates, and more!
